

The KOMA-Script package

tocstyle*

Markus Kohm

2009/11/09

While the main classes of the KOMA-Script bundle were made, there were several ideas for formatting the table of contents and lists of floats, but almost none of them were implemented. One reason was, that the KOMA-Script author didn't like to change the L^AT_EX kernel at a class, because this may result in several problems with other packages. The package `tocstyle` will fill the gap. If it conflicts with another package, you simply may decide not to use it.

A.3.5. <code>noonewithdot</code> with Option <code>tocfullflat</code>	47
A.3.6. <code>nopagecolumn</code> with Option <code>tocfullflat</code>	48

1. How It Works

Loading the package `tocstyle` will redefine the kernel macro `\@starttoc`. Using the redefined `\@starttoc` will redefine `\@dottedtocline`, `\l@part` down to `\l@subparagraph`, `\l@figure`, and `\l@table`, if and only if `tocstyle` wasn't deactivated for all TOCs or this TOC. Usage the redefined `\@dottedtocline` will redefine `\numberline`.

Redefining `\@starttoc`, `\@dottedtocline`, and `\numberline` will activate the features of `tocstyle` for all lists that uses these, e.g. table of contents, list of figures and list of tables at the standard or the KOMA-Script classes. But while not all classes uses `\@dottedtocline` and `\@numberline` for all entries to table of contents and list of floats the package redefines some other macros that are typically used for those entries. These are e.g.

`\l@part`, `\l@chapter` and some more. If the class even does not use those macros, you may not use `tocstyle` to change the lists. The term TOC will be used for all kind of list, that may be processed by `tocstyle`. The package tests whether the original kernel macros `\@starttoc`, `\@dottedtocline`, and `\numberline` were used or not and warns if not.

Package `tocstyle` needs some more information. For the standard and the KOMA-Script classes these informations may be detected by the package. If the result is not the expected, you may configure these informations manually.

The entries of every TOC hat a depth. See the counter `tocdepth` for more information about the depth. You may change several settings for the entries of either all depths of all TOCs, all depths of one TOC, or one depth of one TOC.

But most users will not need to set up `tocstyle` at this low level. They simply will select one of the predefined styles and maybe select one of the optional features.

2. Optional Features

Optional features will be selected using a package option while loading the package or using the package option as a global option loading the class using `\documentclass`. Optional features change general behaviour of all TOCs.

`tocindentauto`
`tocindentmanual`

With option `tocindentauto` all widths at the TOCs are calculated by `tocstyle`. The calculation of the width needs at least one L^AT_EX run with all TOC entries. So you need at least three L^AT_EX runs:

- one to write all the TOC entries to the TOC file
- one with the known TOC entries from the TOC file but unknown widths
- one with the known TOC entries from the TOC file and known widths

If the TOC entries changed between the second and the third run—e.g. because of page numbers changed—you'll need one more run (and so on).

Note: The widths of all entries of same depth and same TOC are same. Don't ask for less width of page numbers at the first than the last TOC page!

`tocgraduated`
`tocflat`
`tocfullflat`

The option `tocgraduated` selects the graduated version of all TOCs. You know the graduated version from the standard classes. Entries of lower depth are indented against entries of higher depth. This may e.g. look like:

1. How It Works	2
2. Optional Features	3
3. Using TOC Styles	6
4. Setting-up Single Features	6
5. Defining New TOC Styles	9
6. Processing a TOC	9
7. Configuration file	10
8. Implementation	11
8.1. Option	11
8.2. Body	13
8.2.1. Redefining L ^A T _E X Kernel Macros	13
8.2.2. Redefining Class Macros	17
8.2.3. New Macros	20
8.2.4. Defining Some TOC Styles	28
8.2.5. Defining Some TOC Styles	29
A. Examples for the Different TOC Styles	31
A.1. Graduated Versions	31
A.2. Flat Versions	37
A.3. Fullflat Versions	43

The option `tocflat` selects the flat—aka left aligned—version of all TOCs. You know the flat version from the KOMA-Script classes using option `tocleft`. This may e.g. look like:

1. How It Works	2
2. Optional Features	3
3. Using TOC Styles	6
4. Setting-up Single Features	6
5. Defining New TOC Styles	9
6. Processing a TOC	9
7. Configuration file	10

A.	Examples for the Different TOC Styles	31
A.1.	Graduated Versions	31
A.2.	Flat Versions	37
A.3.	Fullflat Versions	43

Default is option `tocgraduated`.

`tocbreaksstrict`
`tocbreakscareless`

Default option `tocbreaksstrict` sets a lot of penalties before and after TOC entries to avoid page break between a TOC entry and it's parent. But sometimes you may like to allow more page breaks. You may use option `tocbreakscareless` for this.

`toctextentriesindented`
`toctextentriesleft`

With default option `toctextentriesleft` unnumbered TOC entries, e.g. from KOMA-Script command `\addchap`, are indented only as wide as the number of numbered TOC entries of the same level are. But with option `toctextentriesindented` these are indented as if they have an empty number.

3. Using TOC Styles

Package `tocstyle` has several predefined toc styles. Most users will never need to define their own toc style but only select one of the predefined and maybe configure it by one of the options described at the previous section.

`\usetocstyle`

You may set the style of one or all TOCs. If you want to set the style of all TOCs, you'd simply say `\usetocstyle{<style>}`. This will set all settings of the given style to all TOCs. Individual settings will overwrite this general setting.

If you use `\usetocstyle[<TOC>]{<style>}`, only the style of the given TOC will be set. This will be done *after* the general setting. Only individual settings of single features may overwrite the setting of the style.

The table 1 shows the predefined styles, that may be used as mandatory argument of `\tocstyle`. The optional argument `<TOC>` is the shortcut (file extension) of the TOC. Examples of known shortcuts are shown at table 2.

Note: Before you're setting a style the style of the TOCs are unspecified. This means that some entries may be set using `tocstyle` others may not.

`\deactivatetocstyle`
`\reactivatetocstyle`

Both commands have one optional argument `<TOC>`. You may deactivate the influence of `tocstyle` for a TOC and reactivate it. If you use `\deactivatetocstyle` without the optional argument or empty optional argument, the influence of `tocstyle` for all TOCs will be deactivated and may be reactivated only using `\reactivatetocstyle` without the optional argument or empty optional argument too.

After deactivation of `tocstyle` for one TOC or all TOCs you may continue configuring TOCs. All these changes will be used after reactivation.

4. Setting-up Single Features

At the previous section you've learned how to select a predefined TOC style. You were also told, that you may change one or more features against the

Table 1: Predefined TOC Styles

standard	A style similar to the standard classes. All width are predefined to the width of the standard classes, but may be overwritten by the general options (see section 2). The depth -1 (part) and 0 (chapter) are set in bold face (<code>\bfseries</code>). If no depth 0 was found at the TOC, depth 1 (section) will be set in bold face, too. All other depth will be set in normal font. Depth -1 (part) will be set using <code>\large</code> . The font changes are valid for the page numbers, too.
KOMAlike	A style similar to the KOMA-Script classes. This is almost the same like standard , but instead of bold face <code>\usekomafont{disposition}</code> will be used if <code>\usekomafont</code> was defined and sans serif, bold face (<code>\sffamily\bfseries</code>) if not.
classic	Like KOMAlike but all page numbers are set using normal font.
allwithdot	Like classic but dots between entry text and page numbers are used at all depths.
noonewithdot	Like classic but not dots between entry text and page numbers are used.
nopagecolumn	Like noonewithdot but also the gap between text and page numbers is omitted. This means, that the page numbers are set 1 em after the text.

Table 2: Known TOC Shortcuts

toc	Table of contents of almost all known classes.
lof	List of figures of almost all known classes.
lot	List of tables of almost all known classes.
lol	List of listings of package listings. Currently the usability of listings with <code>tocstyle</code> is not recommended. Maybe it works, maybe not. Maybe you should try <code>\deactivatetocstyle[lol]</code> .

Table 3: Features that May Be Set

<code>dothook</code>	will be executed before any dot of the dot line
<code>entryhook</code>	hook before the entry will be set
<code>entryvskip</code>	initial vertical skip amount (if not set 0pt plus .2pt will be used)
<code>leaders</code>	commands for fillin the gap between entry text and page number (if not set the default leaders command with dots will be used)
<code>pagenumberbox</code>	the box command for setting the page number (if not set the default box of with <code>\@pnumwidth</code> will be used); note, that this has to be a command with exactly one argument
<code>pagenumberhook</code>	hook before the page number will be set at the page number box
<code>parfillskip</code>	add this amount to the default value of <code>\parfillskip</code> after setting up all lengths
<code>raggedhook</code>	the only allowed values here are <code>\raggedright</code> or nothing
<code>spaceafternumber</code>	amount of minimum space after the entry number, if the needed width will be calculated automaticly

used predefined TOC style for one or all depth of one ore all TOCs. Now you will learn how to do this.

`\settocfeature` These commands are used to set a single feature eiaher of all depth of all
`\settocstylefeature` TOCs (`\settocfeature` $\langle feature \rangle$ $\langle command \rangle$) or `\settocstylefeature`
 $\langle feature \rangle$ $\langle commands \rangle$), or of all depth of a single TOC (`\settocfeature`
 $[\langle TOC \rangle]$ $\langle feature \rangle$ $\langle commands \rangle$), or of a single depth of all TOCs
 $(\settocstylefeature$ $[\langle depth \rangle]$ $\langle feature \rangle$ $\langle commands \rangle$), or of a
single depth of a single TOC (`\settocfeature` $[\langle TOC \rangle]$ $[\langle depth \rangle]$
 $\langle feature \rangle$ $\langle commands \rangle$).

Parameter $\langle commands \rangle$ is a list of commands. In most cases these must not be commands, that need an argument. So you should e.g. not use `\textbf` but `\bfseries` to switch to bold face. Parameter $\langle feature \rangle$ is the feature, that may be configured with parameter $\langle commands \rangle$. All known features are show at table 3.

The order of used commands for a feature is

1. commands for all depths of all TOCs,

2. commands for all depth of a single TOC,
3. commands for a single depth of all TOCs,
4. commands for a single depth of a single TOC,

and settings of `\usetocstyle` may be overwritten by `\settocfeature` und `\settocstylefeature`.

5. Defining New TOC Styles

Now you know how to select a prefedined TOC style and how to change single features. But wouldn't it be nice to define your own TOC style?

`\newtocstyle` You may do this using `\newtocstyle` [*parent style*] [*exclude features*] *{style name}* *{\settocstylefeature-commands}*. If you used the optional argument *parent style* all features of the parent style will be part of the new style, before overwriting them with the features of the *{\settocstylefeature-commands}*. You should not use any other commands at the last argument. But at `\newtocstyle` the command `\settocfeature` becomes an alias for `\settocstylefeature` to avoid to much mistakes.

The second optional argument is a comma seperated list of feature names. If it is used, these features of the parent style (and all ancestors of the parent) will not be part of the new style.

`\aliastoc` Using `\aliastoc` *{original-TOC}* *{alias-TOC}* you may define an alias for a TOC. The first argument is the original TOC for that the second argument should be the alias. An alias-TOC will be processed with all settings, that were done for the original-TOC. Internally this command is used as default for the optional, first argument of `\showtoc`.

6. Processing a TOC

While \LaTeX inputs a toc file it processes the commands of the TOC. These commands mainly produce the entries of the toc. Some commands are only available or valid while a TOC is processed. But be carefull: Some of these are read-only commands. Changing such a read-only command may result in various errors!

`\@starttoc` The internal comand `\@starttoc` is defined by the \LaTeX kernel. It is used
`\showtoc` by package and class authors to build commands like `\tableofcontents` or `\listoffigures`. Without using it you will not get a toc file. `tocstyle` redefines it, to add pre- and post-processing commands. The original definition found by `tocstyle` will be used inside the redefinition.

`\showtoc` [*preproression*] *{TOC}* is an addition of `tocstyle`. Using it will procude a copy of TOC and process this copy. The copy

will be done just after creating the original TOC. The copy will be an alias for the original file. The extension of the copy is the generated alias if $\langle TOC \rangle$. You may generate the alias using `\aliastoc` at the optional argument of `\showtoc`. The default for this optional argument will be `\aliastoc\tocstyleTOC\tocstyleAliasTOC` and the default alias `\tocstyleAliasTOC` will be `\tocstyleTOC` extended by a number. The first TOC example at section 2 was made using

```
\showtoc [{%
  \aliastoc{\tocstyleTOC}{toc}%
  \usetocstyle[toc]{standard}%
  \settocfeature[toc]{raggedhook}{\raggedright}%
  \selecttocstyleoption{tocgraduated}%
}] {toc}
```

If you want to show a copy the table of contents, that shows only depth 1 of the headlines you may simply use:

```
\showtoc [{%
  \expandafter\value{tocdepth}=1\relax
  \aliastoc{\tocstyleTOC}{toc}%
}] {toc}
```

or

```
\newcounter{savedtocdepth}
\setcounter{savedtocdepth}{\value{tocdepth}}
\setcounter{tocdepth}{1}
\showtoc{toc}
\setcounter{tocdepth}{\value{savedtocdepth}}
```

`\tocstyleTOC` These are read-only macros. While processing a TOC using `\@starttoc`
`\tocstyleAliasTOC` or `\showtoc`, `\tocstyleAliasTOC` is the shortcut, that is valid for the features and `\tocstyleTOC` is valid for the file extension to be used.

`\tocstyledepth` This is a read-only macro. While processing a single toc entry with `\@dottedtocline` this is the depth (first argument of `\@dottedtocline`) of this entry. Most users will never need this, but it is often used internally. Because of this *you should never change it!*

`\iftochasdepth` Using `\iftochasdepth{\langle TOC \rangle}{\langle depth \rangle}{\langle true \rangle} {\langle false \rangle}` you may test, if an entry of a given depth was already output to a TOC. If so the commands of argument $\langle true \rangle$ will be processed. If not so the commands of argument $\langle false \rangle$ will be processed.

7. Configuration file

There's another feature for new toc styles. If there's a file `tocstyle.cfg` it will be loaded at the end of the package. This is usefull to define your own toc styles.

8. Implementation

```
1 \PackageWarningNoLine{tocstyle}{%
2 THIS IS AN ALPHA VERSION!\MessageBreak
3 USAGE OF THIS VERSION IS ON YOUR OWN RISK!\MessageBreak
4 EVERYTHING MAY HAPPEN!\MessageBreak
5 EVERYTHING MAY CHANGE IN FUTURE!\MessageBreak
6 THERE IS NO SUPPORT, IF YOU USE THIS PACKAGE!\MessageBreak
7 Maybe it would be better, not to load this package%
8 }
```

8.1. Option

Options change general behaviour of TOCs.

`\selecttocstyleoption`

```

8.2. Body

There are two parts at `tocstyle`:

- redefining internal \LaTeX kernel macros,
- defining new macros and redefining class macros.

Redefining \LaTeX kernel macros may not be switched of. But redefining class macros will only be on demand.

8.2.1. Redefining \LaTeX Kernel Macros

Some \LaTeX kernel macros must be redefined to add the new functionality. Before redefining them, we test against the definition at kernel 2005/12/01

```

\@starttoc The original definition will be extended by defaults for \parskip, \parindent
\tocstyle@saved@@starttoc and \parfillskip and storage of the shortcut of the current TOC.
93 \newcommand*\tocstyle@saved@starttoc{}
94 \let\tocstyle@saved@starttoc\@starttoc
95 \renewcommand*\@starttoc[1]{%
96   \tocstyle@pre@starttoc{#1}%
97   \tocstyle@saved@starttoc{#1}%
98   \tocstyle@post@starttoc{#1}%
99 }

\tocstyle@saved@dottedtocline For saving the unchanged definition (at \begindocument):
100 \newcommand*\tocstyle@saved@dottedtocline{}

\tocstyle@dottedtocline Implement new definition and redefine:
101 \newcommand*\tocstyle@dottedtocline[5]{%
102   \let\numberline\tocstyle@numberline
103   \ifnum #1>\c@tocdepth \else

```

Penalty feature: no page break between higher and lower depths.

```
104 \iftocstyle@penalties
105 \begingroup
106 \@tempcnta 20010
107 \advance \@tempcnta by -#1
108 \ifnum \@tempcnta>\lastpenalty
109 \aftergroup\penalty\aftergroup\@lowpenalty
110 \fi
111 \endgroup
112 \fi
```

Activation of all features for this TOC and depth:

```
113 \edef\tocstyledepth{#1}%
114 \tocstyle@activate@features
```

Similar to kernel command but if feature `entryvskip` was set use `\addvspace`:

```
115 \ifx\tocstyle@feature@entryvskip\relax
116 \vskip \z@ \@plus.2\p@
117 \else
118 \addvspace{\tocstyle@feature@entryvskip}%
119 \fi
120 {%
```

Preinitialization of lengths and skips and then call a hook

```
121 \parskip \z@ \parindent \z@ \leftskip \z@ \rightskip \z@
122 \tocstyle@feature@raggedhook
```

Set number indent to `\@tempdimb` and text indent to `\@tempdima`.

```
123 \@tempdima #3\relax
124 \@tempdimb #2\relax
125 <trace> \typeout{number indent by \string\l@... (\tocstyleTOC, \tocstyledepth)
126 <trace> \typeout{text indent by \string\l@... (\tocstyleTOC, \tocstyledepth):
```

Calc auto lengths. Use max. of last run of parents if available.

```
127 \ifnum #1>\z@\relax
128 \@tempcnta #1\relax \advance\@tempcnta \m@ne
129 \ifcsname tocstyle@maxskipwidth@\tocstyleTOC @\the\@tempcnta\endcsname
130 \ifcsname tocstyle@maxnumwidth@\tocstyleTOC @\the\@tempcnta\endcsname
131 \@tempdimb
132 \csname tocstyle@maxskipwidth@\tocstyleTOC @\the\@tempcnta\endcsname
133 \advance\@tempdimb
134 \csname tocstyle@maxnumwidth@\tocstyleTOC @\the\@tempcnta\endcsname
135 \fi
136 \fi
137 \fi
138 <trace> \typeout{number indent by parent (\tocstyleTOC, \tocstyledepth): \spa
